

Precision made in Germany. As per DIN 8606. The heart of a system, now also available as CNC-ready version.

Precision lathe PD 400/CNC-ready

Interesting for users who already own a control unit or would like to purchase one from another provider on the market.

Axes drive with powerful step motors and recirculating ball spindles (no backlash). For facing and longitudinal turning, for turning balls, radii and any freely formed contours made of steel and nonferrous metal.

Otherwise, the mechanical design is almost identical to the proven PROXXON precision lathe PD 400.

NO 24 504
